For the oligomers, each silicon atom in the polysilsesquioxane is connected via oxygen atoms to three other silicon atoms and can be represented by the empirical formulation RSiO3/2 where R represents the phenylaminopropyl group. For the larger polymeric polysilsesquioxanes, some of the silicon atoms are not connected to other silicon atoms and instead have a silanol (SiOH) group. Phenylaminopropyl Polyssequioxane is prepared by the hydrolysis and condensation of N-phenylaminopropyl trimethoxysilane.		NAIL CONDITIONING
